在 Debian 9.9 下手动安装Tomcat

Published on May 17, 2020 in with 0 comment

#写在前面:

适用于阿里云轻量云服务器所提供的Debian 9.9镜像,并且没有出现任何问题。

下载文件并解压

```
wget http://f.lepton.icu/apache-tomcat-9.0.19.tar.gz
tar -xzvf apache-tomcat-9.0.19.tar.gz
mv apache-tomcat* /usr/local/tomcat
```

配置 service 文件用于管理运行状态

```
vi /lib/systemd/system/tomcat.service
```

以下是一个模版

```
[Unit]
Description=tomcat service
After=network.target
[Service]
Type=forking
ExecStart=/usr/local/tomcat/bin/catalina.sh start
ExecReload=/usr/local/tomcat/bin/catalina.sh restart
ExecStop=/usr/local/tomcat/bin/catalina.sh stop
PrivateTmp=true
[Install]
WantedBy=multi-user.target
```

修改tomcat运行环境在 /usr/local/tomcat/bin/setclasspath.sh 添加以下内容并保存

```
JAVA_HOME=/usr/local/java
```

Lepton

完成安装
